Introduction

This submission explains why serving self interest rather than the people tends to end in disaster.

A Word Of Warning

When banks have to use government to enact laws (Currency restrictions on the use of cash bill 2019) that force people into specific actions (cashless society) rather the let the market decide for themselves because banks know that the market will reject what they offer (negative interest rates) will only end in disaster for the government/banks XD.

A quote from a bloke with some common sense XD.

Conclusion

My point is don't do it.
